## CS 346: Meeting Minutes

Date: Oct 30<sup>th</sup> 2023

Team: 211

Present: All

Absent:

---

### Agenda

- Discussing about how to use database for features like saving notes, todo, events, etc
- Discussing about the issues with displaying events in daily calendar and monthly calendar.

### Notes

- When saving notes, we can convert the notes into html and store it as strings in the database. Whenever we click the notes, we load the corresponding notes from database.
- We can use the form of table to store to-dos in database, then when we read the to-do list from database, we can create the class accordingly.
- If there are too many events in a day, not all events will show in the date cell.

### Decisions

- We decide to use vertical scroll to solve the event displaying issue in calendar.
- We decide to use the same button for event in calendar as in to-do.

## **Actions**

- Implementing the saving notes feature.
- Implementing the creating to-do feature.
- Solving the displaying events in calendar issue.
